New Integrated Risk Assessment and Risk Remediation SaaS Tools from ACR 2 Solutions and Compliance Helper Help Complete item 15 Core Measure for Meaningful Use Funds

The complete cycle of compliance required under HIPAA HITECH for Stage 1 Meaningful Use is managed cost effectively and efficiently. Risks are revealed, remediated or addressed with a simple interface between the two systems.

Oakland, California (PRWEB) February 21, 2012

Risk management and remediation services are delivered through an easy to use, integrated system which will allow users to meet the only non-EHR capable requirement of eligible professional core measure 15 to qualify for Meaningful Use funds. You will also meet the HIPAA HITECH compliance standards. ACR 2 Solutions and Compliance Helper have joined together to build the interfaces needed to deliver the complete Cycle of Compliance; get compliant, stay compliant, prove compliance. A risk revealed by ACR2 can be remediated by CH and updated back to ACR2. The SaaS model allows a privacy and security expert to monitor compliance activities providing oversight, advice, and coordination. A simple, easily understood, step by step process leads you while the system documents your activities. Dashboards and the Compliance Meter(tm) allow you to monitor your progress and display your compliance to your business partners.

Our products use the US Government's security framework developed by the National Institute of Standards and Technology (NIST) for assessing the security of computer systems. This standard provides a roadmap for securing medical database systems in order to harden those systems and secure the Protected Health Information. Our products will help secure the medical office computer network and allow the development of the required HIPAA Privacy and Security Rule Policy. When an organization installs an Electronic Health Record database it will be acceptably secure from identity thieves, provide access to other practitioners and other authorized users and allow you to qualify for Meaningful Use funds.

About ACR 2 Solutions: The company specializes in the growing information security and compliance market, focusing on risk assessment and management for regulatory compliance with federal laws including GLBA, HIPAA, FISMA and the payment card industry requirement of PCI DSS. ACR2 offers automated security risk assessment solutions helping companies meet federal compliance requirements for monitoring and reporting.

About Compliance Helper: The company is focused on the healthcare industry and privacy and information security. The SaaS technology and task centered methodology are supported by a personal privacy and security expert called a Helper assigned to each client. The Compliance Meter(tm) allows the organization to prove their on-going compliance to their business partners. Their partner, Rebecca Herold & Associates provides privacy and security advice and develops all of the policies, procedures, and forms.
